IACT

Thank you for your interest in **CasePresenterOrthodontics™**. New patients are the lifeblood of an orthodontic practice and we want to help you explore what is possible with your new patients.

[Click here to see a brief demo](#)

70% of the population's primary learning style is visual and a majority of new patients present for their first appointment without a clear chief concern. Therefore, it is important they understand the orthodontist's presentation of their findings and the need/benefit of orthodontic treatment. Yet, most orthodontists choose to use a mirror or the new patient's images as visual aids during their explanation when these are merely a snapshot of the current condition. As result, orthodontists find themselves gesturing with their hands to overcome confused looks and the opportunity for a more powerful first impression is lost.

Integrating **CasePresenterOrthodontics™** into your new patient process arms you with movies and animations to address any situation that a new patient may present. You show more and say less as you quickly and easily transfer information! Looks of interest and anticipation replace blank and confused ones. The enhanced comprehension raises patients' motivation, which not only increases case acceptance rates but participation during treatment as well!

We invite you to see how **CasePresenterOrthodontics™** helps practices inspire new patients and to explore what is possible for your new patients. Special pricing is available thru **July 23, 2021**.
